Accelerate growth today by expanding your production services with P3Source

P3Source tracks your production history

Organize and centralize all data pertaining to current and previous jobs, suppliers, customers, pricing and production details across the enterprise, all within a simple and efficient workflow.

Unlike other systems, P3Source works with your existing suppliers

You have history and a clear understanding of the capabilities of your vendors. We know these relationships are essential to your business, so P3Source enables the suppliers you select without any cost, training or login, so they can respond to an RFQ and fulfill the job. It's easy.

You define what each user can see and do in the P3Source system

P3Source includes an advanced editor giving you the ability to establish specific rules with certain customer accounts or system users. Maximum order levels can be set, minimum and default mark-ups and much more can be defined. Customer management tools include transaction rules that can be established to insure bidding compliance and transparency when required. In addition, if your customer has expressed preference for specific suppliers, you can define customer/supplier relationships ensuring those vendors have an opportunity to participate.

Managing print projects shouldn't require an advanced degree in procurement

P3Source enables print and media project sourcing with a professional workflow. Built specifically for the print industry, P3Source mitigates capacity and equipment issues, allowing you to capture the revenue and the profits by sourcing the production.

A powerful reporting system

Build custom/bespoke reports and view them in the system or, just as easily, in excel or other reporting tools. Create customer reports, supplier reports, bidding reports, transaction reports, cost saving reports...The sky's the limit.

P3Source provides best in class workflow

Sometimes print management is only part of the solution required by an organization. That's why P3Source currently integrates with accounting, CRM, project management, web to print and SSO software systems including SAP, JD Edwards, Quickbooks, Pressero, WedCRD and others, including custom integration into legacy systems. We have an aggressive integration strategy, because no software does everything you need. Through system integration, broad and highly effective workflow solutions can be created to best fit your requirements.

What others are saying about P3Source

"P3 allows my team to provide the best products at the best prices to the partners we serve. It's easy to use and allows us the flexibility to load level the production work among our four member team. P3 helps us to clearly demonstrate to my leaders the value our department brings to the company!"

Sheri Russo
Wyndham Hotels & Resorts, US

"For us P3 has been the difference between being in business and not. It is a company whose ownership and staff have truly walked the walk and understand the needs of an efficient time saving yet detailed print management system that's not tied to an expensive and one dimensional printing workflow."

John Ball
Ball Media, CA

"We use P3Software technology on a daily basis for all of UNICEF UK's print procurement purposes. It is an extremely effective tool which allows us to instantly compare quotes, boost savings and create a cloud-based print quote archive. It is invaluable."

Mel Collister
Unicef, UK
